How do I install and configure the AVer iViewer for iPhone/iPad/iPod to view my DVR? 

There are two methods for installing the iViewer for iPhone/iPad/iPod. The method discussed for the purposes of this FAQ is by downloading the App from the Apple App Store on your iDevice.

Note: This FAQ assumes you are using iOS 6 on an iPhone however, this process is nearly identical on an iPad.

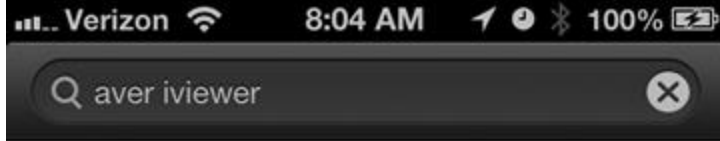

1. Begin by clicking the App Store icon on your iDevice.

2. Press the Search button.

3. Enter into the search box "aver iviewer", then press Search.

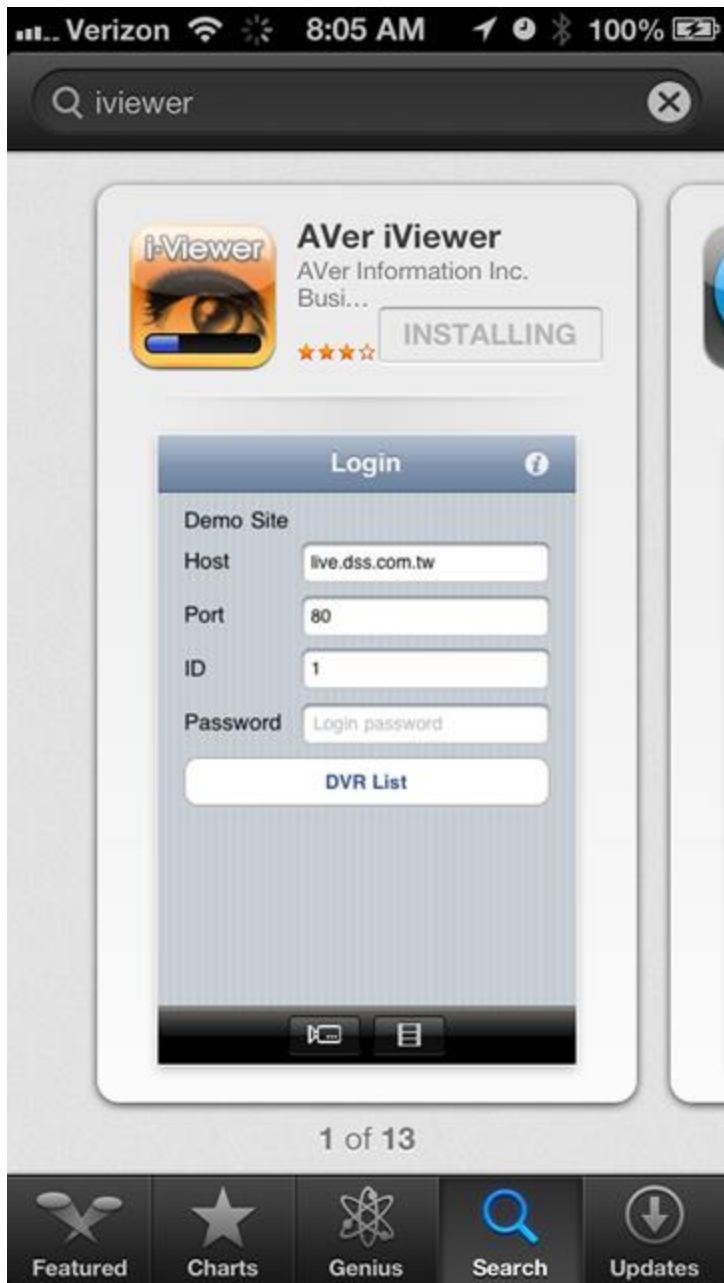

All results for aver iviewer

aver iviewer

4. Select the app and install.

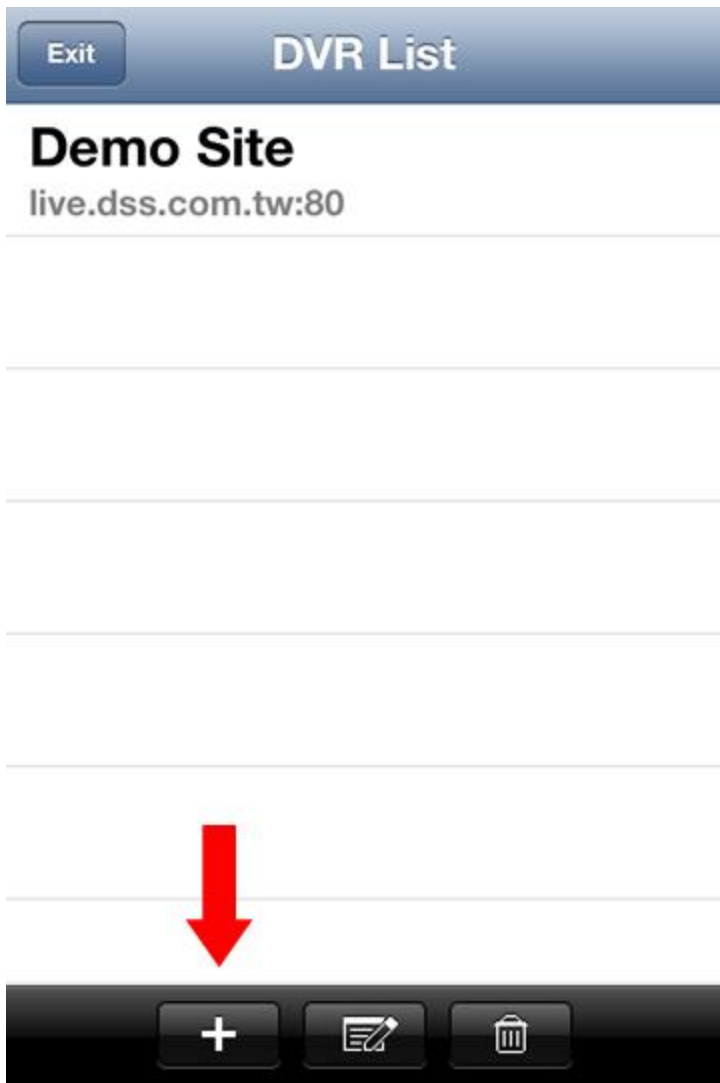

5. Once the app has been downloaded, launch the app by selecting the AVer iViewer icon from the main screen.

The first screen you are presented with upon launching the app is the settings page for the default DVR Site "Demo Site". You can either click the View Cameras button (red rectangle) to view the Demo Site or touch DVR List to get started configuring your DVR.

6. Press the plus sign "+" to add your DVR into the DVR List.

7. Fill in the following screen and then press Save.

Cancel **Add DVR** **Save**

Name

Host

Port

ID

Password

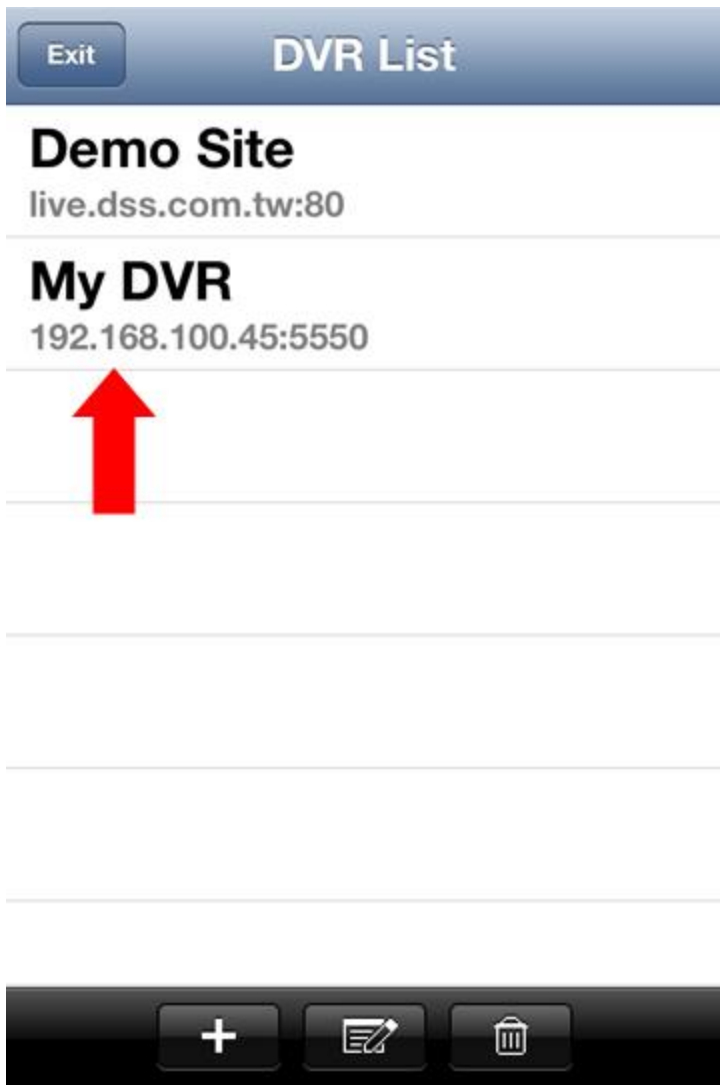

Name can be anything; such as "My DVR".

Host can be an IP Address (such as 192.168.100.45) or a domain name (such as remote.avers.com.tw).

Port is typically 5550.

ID and Password are the same as the accounts in the DVR software for login.

8. You can now select your DVR in the DVR List.

9. Press the camera icon below to view your DVR live.
